About World Scientific

World Scientific Publishing Co. is a leading international scientific publisher based in Asia. The company has published many works by world-renowned scientists.

In 1991, it was awarded the exclusive rights to publish, in English, a series of Nobel Lectures in various subject areas: Physics, Chemistry, Physiology/Medicine, Economics, Literature and Peace. World Scientific is also a publisher of many important scientific, technical and medical journals.

ADVERTISEMENTS

First & Only in the Region! Worldwide Circulation!

Asia-Pacific Biotech News is an excellent means of exposure for your products and services, recruitments, new courses and conferences/workshops.

Your advertisements will:
- be featured in both the English and Chinese printed versions
- receive Internet exposure
- reach the hands of scientists, researchers, doctors, businessmen and bankers.

Special offer valid until end of 1997

BIOBASED INDUSTRIAL PRODUCTS: Research and Commercialization Priorities

Committee on Biobased Industrial Products, National Research Council

Petroleum-based industrial products have gradually replaced products derived from biological materials. However, biologically based products are making a comeback because of a threefold increase in farm productivity and new technologies.

In Biobased Industrial Products an expert committee envisions a biobased industrial future, where starch will regularly be used to make biopolymers and vegetable oils will become a routine component in lubricants and detergents. It offers recommendations to launch a National Biobased Industrial Initiative and speed the transition from carbon to “renewables”.

Biobased Industrial Products overviews the U.S. land resources available for agricultural production, summarizes plant materials currently produced, and describes prospects for increasing varieties and yields.

The committee discusses the concept of the biorefinery and outlines proven and potential thermal, mechanical, and chemical technologies for conversion of natural resources to industrial applications.

The committee also illustrates the developmental dynamics of biobased products through existing examples, as well as products still on the drawing board. And it identifies priorities for research and development.

Sept 1997 180pp(approx.) 0-309-05392-7 US$36
Published by National Academy Press, USA and distributed by World Scientific Publishing Co.

AGRICULTURAL CROP ISSUES AND POLICIES

Genetic diversity is one of agricultural’s first lines of defense against loss to biologic and environmental stresses. Yet, the world’s genetic resources are continually threatened by these stresses and by human activities. This anchor volume to the series Managing Global Genetic Resources examines the structure that underlies efforts to preserve genetic material, including the world-wide network of genetic collections, the role of biotechnology, and a host of scientific, institutional, legal, economic, and political issues that surround management and use.

Among the topics explored are in-situ versus ex-situ conservation, management of very large collections of genetic material, problems of quarantine, the controversy over ownership or copyright of genetic material, the interest of developing countries, and more.

A highly readable overview of the field with specific recommendations for future directions, this volume will be of interest to agricultural policymakers, researchers, as well as practitioners.

Dec 1991 490pp(approx.) 0-309-04430-8 US$48
Published by National Academy Press, USA and distributed by World Scientific Publishing Co.

BIODETERIORATION

National Academy of Sciences

“...[the most comprehensive and easily read synthesis available to date on the consequences of destruction of biological diversity...highly recommended.”
Library Journal

“Biodiversity should be used in every secondary and college biology classroom throughout the English-speaking world.”
Bioscience

“Anyone concerned with biodiversity should own this book...”
Science

This important book for scientists and nonscientists alike calls attention to a most urgent global problem: the rapidly accelerating loss of plant and animal species to increasing human population pressures and the demands of economic development.

Published by National Academy Press, USA and distributed by World Scientific Publishing Co.

BIOTECHNOLOGY: Science, Engineering, and Ethical Challenges for the 21st Century

Frederick B. Rudolph, Ph.D., and Larry V. McIntire, Ph.D., Editors

Biotechnology – the manipulation of the basic building blocks of life is rapidly advancing in laboratories, raising serious issues for scientists and nonscientists alike. Who will decide what is safe? Who will have access to our personal genetic information? What are the risks? Biotechnology offers straightforward explanations of basic science and provides insight into these questions.
