

# Teleradiology Solutions Launches First Teleradiology Training Center in India

## About Teleradiology Solutions

Teleradiology Solutions was founded in 2002 by two Yale trained physicians, Dr Arjun Kalyanpur and Dr Sunita Maheshwari. It was initially set up to provide hospitals in the United States with night shift radiology solutions. However, it grew rapidly and now provides teleradiology to hospitals in Singapore and India with other countries on the anvil.

The company provides tele-radiology services to hospitals around the globe, which includes interpretation of all non-invasive imaging studies, namely CT, MRI, ultrasound, nuclear medicine studies and digitized X-rays. Emergency reports are provided within thirty minutes to locations diametrically across the globe. The company provides subspecialty consultations in cardiovascular and oncologic imaging to hospitals in India as well, and has joint research partnerships with major technology vendors such as GE, to explore new techniques in 3D imaging analysis. ■

**T**eleradiology Solutions, a premier provider of tele-radiology services launched 'Rad Gurukul' the first ever tele-radiology training center in India. Located in Whitefield, Bangalore, the facility will be dedicated towards training and refining the skills of radiologists, technologists and IT personnel involved in healthcare IT. Equipped with state of the art amenities, the facility has a state of the art auditorium with videoconferencing facility, which will enable interaction with trainers and trainees from across the globe.

Dr Kiran Mazumdar Shaw, CMD Biocon, inaugurated the training center. The other guests of honor present at the event were Pramila Nesargi, Chairperson, Karnataka Women's Commission and J. Parthasarathy, Director, Software Technology Parks of India.

Dr Kiran Mazumdar Shaw said, "Globally and in India in particular, we know that the prevalence of disease is rising alarmingly, due to changes in lifestyle and diet. Clinical trials radiology is extremely relevant to prove the efficacy, safety and affordability of any new treatment. With high-end equipment and quality infrastructure, Rad Gurukul poses as an ideal training ground for future radiologists and telemedicine experts. This learning and expertise can be leveraged to benefit society."

Dr Arjun Kalyanpur, CEO Teleradiology Solutions said, "Teleradiology Solutions was among the global pioneers to recognize the importance of bridging geographical distances to provide timely diagnosis. Radiology being a niche area, we are today facing an acute shortage of qualified employable talent in India, which includes health care personnel involved in teleradiology IT, technologists and doctors trained in telemedicine. We believe that superior training can bridge this gap and help us reach our goal of establishing India as a hub for high quality teleradiology and telemedicine services."
